Only original Sevroll systems have a lifetime guarantee

Sevroll carriage systems have wheels made of a special, durable material, which means they are perfectly smooth and evenly shaped. Due to our product technology, they do not create unnecessary vibration when moving. This allows the doors to slide steadily and quietly.

All other elements of the carriages are made with the highest precision from top quality, damage-resistant steel. Ball bearings are made with SmoothTec technology, which guarantees smooth and quiet door movement. Our carriages also have special protective ring covers to keep dust out.

You should only buy original Sevroll carriages, which are always in Sevroll packaging.

Only genuine Sevroll profiles are made of high quality aluminum and are subject to detailed quality checks. Please always check what you are buying. Original Sevroll products are easily recognizable by our Sevroll Logo transparent film covering them. The film protects profiles against surface damage during transport.
